MEMORANDUM FOR : Chief, Development Division, OSA
SUBJECT : Oxygen Consumption-Exhalation Valve

1. As part of the effort to explore all avenues re the oxygen consumption problem, the D. Clark Company has been running tests with a compensating exhalation valve. The presently installed valve is simply spring loaded.
2. On short runs of 15-20 minutes the compensating valve is reducing the liters per minute used by approximately 1 1/2. Longer runs will be made in the near future.
3. The Firewel Company is pursuing the problem using a different technique but as yet they have not reported.
